DETAILED ACTION

1. In response to the communications dated 01/25/2002, claims 1-9 are pending in this application.

Acknowledges

2. Receipt is acknowledged of the following items from the Applicant.
Information Disclosure Statement (IDS) filed on 01/25/2002 and made of record as Paper No. 2. The references cited on the PTOL 1449 form have been considered.

Foreign Priority

3. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Acknowledgment is made of applicant's claim for foreign priority based on an application filed in United Kingdom on 06/08/2000.

Specification

4. The following guidelines illustrate the preferred layout for the specification of a utility application. These guidelines are suggested for the applicant's use.

Arrangement of the Specification

As provided in 37 CFR 1.77(b), the specification of a utility application should include the following sections in order. Each of the lettered items should appear in upper case, without underlining or bold type, as a section heading. If no text follows the section heading, the phrase "Not Applicable" should follow the section heading:

- (a) TITLE OF THE INVENTION.
- (b) CROSS-REFERENCE TO RELATED APPLICATIONS.
- (c) STATEMENT REGARDING FEDERALLY SPONSORED RESEARCH OR DEVELOPMENT.
- (d) INCORPORATION-BY-REFERENCE OF MATERIAL SUBMITTED ON A COMPACT DISC (See 37 CFR 1.52(e)(5) and MPEP 608.05. Computer program listings (37 CFR 1.96(c)), "Sequence Listings" (37 CFR 1.821(c)), and tables having more than 50 pages of text are permitted to be submitted on compact discs.) or
REFERENCE TO A "MICROFICHE APPENDIX" (See MPEP § 608.05(a). "Microfiche Appendices" were accepted by the Office until March 1, 2001.)
- (e) BACKGROUND OF THE INVENTION.
 - (1) Field of the Invention.
 - (2) Description of Related Art including information disclosed under 37 CFR 1.97 and 1.98.
- (f) BRIEF SUMMARY OF THE INVENTION.
- (g) BRIEF DESCRIPTION OF THE SEVERAL VIEWS OF THE DRAWING(S).
- (h) DETAILED DESCRIPTION OF THE INVENTION.
- (i) CLAIM OR CLAIMS (commencing on a separate sheet).
- (j) ABSTRACT OF THE DISCLOSURE (commencing on a separate sheet).
- (k) SEQUENCE LISTING (See MPEP § 2424 and 37 CFR 1.821-1.825. A "Sequence Listing" is required on paper if the application discloses a nucleotide or amino acid sequence as defined in 37 CFR 1.821(a) and if the required "Sequence Listing" is not submitted as an electronic document on compact disc).

The specification has been checked to the extent necessary to determine the presence of possible minor errors. However, the applicant's cooperation is requested in correcting any errors of which applicant may become aware in the specification.

Claim Rejections - 35 USC § 112

Art Unit: 2828

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claims 1-9 are rejected under 35 U.S.C. § 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Regarding claims 1 and 3, the phrase "Ne²⁰ isotope and an Ne²² isotope" render the claim indefinite because it is unclear. The claim only recites the linear gas laser. The claim does not specify anything on Ne²⁰ and Ne²² isotope to do with laser. Further, the claim does not recite any structure for frequency stabilized linear HeNe gas laser that can read on figure and does not show any element to recite the feedback. The phrase "in use" is use functional language; it is not the claim language.

Regarding claim 3, the phrase "an interferometric displacement determination device" renders the claim indefinite. It is not proper claim because the invention is about the HeNe gas laser. It is not invention about the interferometer.

Regarding claim 2, the claim is not clear because the claim just list the entire elements. The claim does not recite any structure between elements.

Claims 4-9 depend from rejected claim 1, and 3 thereby render these dependent claims indefinite.

Claim Rejections - 35 USC § 102

Art Unit: 2828

6. The following is a quotation of the appropriate paragraph of 35 U.S.C. § 102 in view of the AIPA and H.R. 2215 that forms the basis for the rejections under this section made in the attached Office action:

A person shall be entitled to a patent unless -

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

35 U.S.C. § 102(e), as revised by the AIPA and H.R. 2215, applies to all qualifying references, except when the reference is a U.S. patent resulting directly or indirectly from an international application filed before November 29, 2000. For such patents, the prior art date is determined under 35 U.S.C. § 102(e) as it existed prior to the amendment by the AIPA (pre-AIPA 35 U.S.C. § 102(e)).

Claims 1-9 are rejected under 35 U. S. C. § 102 (e) as being anticipated by deck, U.S. patent No. 6,434,176.

Regarding claims 1-9. Deck discloses an optical apparatus comprising frequency stabilized linear HeNe gas laser having an Ne (See column 1, line 4-6 and column 4, line 36-40), the apparatus in use having optical feedback toward the laser (See column 5, line 19-26 and fig. 2). It is inherent that at least 0.1% of light output of the laser to be returned toward the laser that means the range of light to be return is very big so all the light feedback to have on that range, an interfermetric displacement (See column 5, line 12), a polarization measurement device (See column 2, line 32-46), a heterodyne frequency measurement device (See column 3, line 64-66 and column 4, line 1-16)

Citation of Pertinent References

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

The patent to Rowley et al. discloses Helium-Neon, U.S. Patent No. 4,987,574.

The patent to Hill discloses Gas Insensitive Interferometric Apparatus and Methods, U.S. Patent No. 6,330,065.
